Senior Full Stack Engineer – MEAN (NodeJS, Angular)

Description
About Digit88

Digit88 is a niche product engineering consulting company based out of Bangalore, India with experience of building offshore development centers for US startups and MNCs since 2014. The founding team has 50+ years of product engineering and services experience out of India, China and the US.

The Opportunity:

Digit88 manages and is expanding the dedicated offshore product development team for its US (Bay Area, NYC) based NLP/Chatbot platform development partner, that is building a next-generation AI/NLP/Chatbots based customer engagement platform. The candidate would be joining an existing team of 30+ engineers and help expand the team that develops and delivers cutting edge front end applications for our client that engage with consumers and manage conversations across the world.

Job Profile:

We are looking for an enthusiastic, self-motivated, hands-on full stack engineer with great troubleshooting skills to join our engineering team. Experience with a fast-paced India/US product start-up or a product engineering services company in a senior full stack engineer role, building and managing a high-performance real-time system is mandatory. Applicants must have a passion for engineering with accuracy and efficiency, be highly motivated and organized, able to work as part of a team, and also possess the ability to work independently with minimal supervision.

In this role, you will:

- Build and maintain scalable web applications with interactive and reactive UI with Angular (latest) and VueJS/ReactJS
- Develop NodeJS backend services using RESTful API conventions
- Monitor, test, and continuously optimize designs
- Deliver testable, maintainable, and high-quality code
- Identify, design, and implement internal process improvements, including automating manual processes, optimizing data flows, and re-designing infrastructure for greater scalability and stability.
- Build analytics tools that utilize the data pipeline to provide actionable insights into customer acquisition, operational efficiency, and other key business performance metrics.
- Engineering duties include technical design, implementation, testing, support and participation in peer code reviews.
- Collaborate and interact with multiple engineering and product teams out of UK, Australia, US for the end-to-end implementation of new tools and applications.
- Follow Agile methodology, JIRA for work planning, issue
